

KWC SELECTION KITCHEN AND BATH

Pure excitement

KWC draws on its long company tradition to ensure that its Swiss quality products make a splash right around the world. Developed and manufactured in Unterkulm in Switzerland's Aargau region, the products are exported to over 50 countries.

Aesthetics

The extraordinarily elegant design of KWC products raises the experience of simply handling water to a new level. These exclusively processed faucets create a refined atmosphere in any kitchen or bathroom.

Functionality

Our many years of experience and the continuous ongoing development of our products give them a unique functionality. We also integrate new technologies to achieve hitherto undreamt of improvements in the way they work.

Ecology

KWC is aware of its environmental responsibilities. We regard the concept of sustainability as a great challenge and incorporate it in everything we do. Thanks to innovative technical features, our products significantly reduce the consumption of water and energy.

KWC is certified in the following areas

- ISO 9001:2000 Quality management systems
- ISO 14001:2004 Environmental management systems
- OHSAS 18001:1999 Occupational health and safety management systems

Swiss quality

KWC is a Swiss company that sets the benchmark worldwide. As a loyal partner, fair play is an important priority and a conscious responsibility. This is why KWC faucets are still designed and manufactured in Unterkulm, Aargau. The commitment to production in Switzerland is a guarantee of the expertise and skill of the workforce, the constant refinement of tried-and-tested technologies and a consistently high-quality product.

Prize-winning design

Numerous awards for its internationally leading designs demonstrate the high regard in which KWC is held across the world.

Moving with the times

Just like the fascinating element of water, KWC too is always on the move. Boldness in making changes and a willingness to innovate have characterized the company since its beginnings in 1874.

Innovative technology

KWC faucets make the daily business of handling water a real experience. Every detail is perfect, every movement is right, every function is impressive.

Form and function

Outstanding quality always includes two aspects: the aesthetic form and the functional. It is only what appeals to us that can move us emotionally – and it is only what represents a reliable value that is capable of convincing us over the long term. At KWC, we look to nature when designing faucets so as to always create exceptional new lines: as durable and resilient as a piece of granite, as impressive and beautiful as a mountain landscape.

KWC ONO

KWC ONO is a masterpiece of contemporary design: delicate in proportion, first class in materials, perfect in workmanship. Its clear and simple lines give this faucet elegance, grace and strength – so you almost forget how practical, robust and easy to use it is. An artistic creation which adds a touch of subtle distinction to any kitchen.

Simple perfection

KWC ONO stands for sustainability and authenticity. The simplicity of the form becomes a symbol of essential beauty, presented with discreet elegance – and adds a touch of subtlety to any kitchen.

KWC ONO comes in chrome or pure stainless steel. The elegant design and fine workmanship on the edges and joints will delight you, day after day.

Perfectionism

Graceful yet incredibly robust: the operating lever on the KWC ONO is made of specially hardened surgical stainless steel, like that used in medical equipment. The material is resistant to fracturing and corrosion. The lever operates the cartridge directly, guaranteeing maximum precision.

Leadership style

The pull-down aerator on the side-operated lever faucet, with its stylishly curved design, is particularly smart. It fits seamlessly into the spout and pulls down up to 27 inches if required.

Customization

Aerated Neoperl® jet or needle spray? A simple touch of a button – and the water flows in the desired mode.

Character studies

Showing character means expressing individuality. KWC ONO is just one example of a faucet series that is made in various versions for different requirements. Whether it is a top-operated version with a pull-out aerator, a pull-down aerator concealed in the elegantly shaped spout or a top-operated model with pull-out spray – a good faucet adapts to the demands of its users.

An object of prestige **highflex[®]**
extended water system

Innovative technology in an ingenious presentation. The characteristic highflex™ spring hose, in refined black, brings together style, flexibility and top performance. The high arched hose can be guided in any direction, but when at rest – with or without the spray holder – it always retains its shape.

DESIGN PLUS

Performance spectrum

Lightly actuating the lever on the spray automatically switches the integrated vacuum diverter over from spout operation to a needle spray. When the lever is pressed down firmly the pressurized stream comes into action. As soon as the adjustment lever is released, the water comes out of the swivel spout again.

KWC LIVELLO

KWC LIVELLO is a high-quality kitchen faucet that meets the highest expectations. A transverse body and clear use of forms characterize this innovation, which adds a welcome touch to sophisticated residential buildings.

STAINLESS STEEL

All-around flexibility

With a swiveling range of 360° and an aerator that can be pulled out up to 23 inches, the radius of action is increased considerably so that, when working in the kitchen, you are not kept on a short leash.

Design

The horizontal pull-out aerator gives KWC LIVELLO its uniqueness and profile. On installation, the lever can be positioned on the right, on the left, or in front.

Operation

Simple aesthetics, well-conceived to the smallest detail: KWC LIVELLO is available in chrome or stainless steel, each version using a different design of operating lever.

KWC SUPRIMO

KWC SUPRIMO manifests its high quality at every glance and touch, and this can be summed up in two words: stainless steel. The pioneer in matters of material quality is also the obvious choice, with its clear forms across the entire line. The elegant, sparse, sleek design and unequivocally precise ease of use guarantee a sparkling appearance for KWC SUPRIMO in any modern kitchen.

STAINLESS STEEL

Play of light

KWC SUPRIMO is also available as an elegant two-hole solution with LUMINAQUA®. While the minimalist shape and concealed pull-down aerator of this stainless steel faucet make it really easy to operate and clean, the LED lighting, incorporated in a transparent plastic ring, envelops the flowing water in a bright glow.

LUMINAQUA®
Advanced Light Technology

Freedom of movement

Practical: the pull-out aerator with an operating range of up to 27 inches in pure stainless steel.

Everything you could ask for

Sophisticated: the alternative with pull-out spray and diverter for aerated Neoperl® jet and needle spray. Variable: the model with an extended height for more space under the spout.

KWC SYSTEMA

KWC SYSTEMA is the high-performance professional solution for private households and at the same time a design object of timeless elegance. Creative cooking needs space – and that is what this extensive series of practical faucets can offer. The robustness of the unit contributes to perfect functionality that makes it an utterly reliable helper in the kitchen, for a lifetime.

Creativity and emotion

Evoking emotions is part of the high art of good product design. In addition to perfect functionality, it is therefore always important to create moods, to stimulate all the senses and to open the heart to aesthetics. By adopting a creative, innovative approach to shapes, colors, materials and technologies, KWC time and again produces faucets with a 'soul' that can touch and enthrall, by appealing to the emotions as well as the rational mind.

KWC **SIN**
KWC **EVE**

page **34**
page **42**

KWC SIN

There are few places that provide as rich a sensorial experience as the kitchen, with its tantalizing aromas, incredible flavors and tempting ingredients for the very latest creations in cuisine. KWC SIN enriches the culinary world. This series, available in four different versions, makes an impressive impact with its stylish design and functional versatility. In short, KWC SIN stimulates your senses just as much as it appeals to your good sense.

DESIGN PLUS

highflex[®]

extended water system

KWC SIN highflex™ is a world's first, uniting two innovative functions: two spray modes (filtered stream/Neoperl® spray) – with the flexible, patented highflex™ spring hose in silver gray – and a swivel spout.

- Spray with highflex™ spring hose: when you lift the spray out of its holder, the highflex™ spring hose offers plenty of flexible room for movement in all directions.
- Swivel spout: when the spray is placed in its holder, the result is a stable swivel spout with a swiveling range of 360°.

Unlimited flexibility

High flexibility and stability combined. The highflex™ spring hose is specially designed so that it returns automatically to its original position. It therefore constantly maintains its elegantly curved profile. When the spring hose is placed in the hand spray holder the result is a stable swivel spout that can be rotated around 360°.

Design

Harmonious design and a sculptural aesthetic are combined with maximum flexibility and a variety of functions that leave nothing to be desired. This enables the range to satisfy the very highest standards in terms of materials and the quality of the finish.

Water as you like it

Besides the sophisticated highflex™ spring hose, the spray on the KWC SIN highflex™ also has what it takes to impress: the spray can be rotated 360° and can be switched between a powerful Neoperl® spray and a gentler filtered stream using the diverter button.

Swivel spout

Elegant yet practical. With its highly curved swivel spout, KWC SIN offers maximum clearance for all types of cookware – even large pots and pans.

Pull-down aerator

True quality often only reveals itself at second glance. And that is certainly true of KWC SIN with its pull-down aerator integrated almost invisibly into the hose guide. The slender, curved spout can be swiveled 360°, creating real, all-around flexibility.

Pull-down spray

Elegance with added value. With this version of KWC SIN, the spray integrated into the 360° swiveling hose guide can be pulled down and extended by up to 19 inches, thus giving you the room you need to be creative in the kitchen. The pull-down spray itself can be rotated around its own axis – all the freedom you could possibly ask for.

KWC EVE

KWC EVE is a shining example of KWC's creativity and innovation. The unique combination of high-quality metal and a stream of water subtly illuminated by LEDs creates a sculpture of light that beguiles with its slim, curved and feminine outline, transforming it into an object of desire. This is complemented by truly sophisticated functionality that makes KWC EVE an absolute highlight without compromise.

White magic or black beauty

Contrasting colors are united by a common style. Whether it is the silky smooth, glacier white matte surface, reminiscent of Corian®, or the black chrome-plated KWC EVE which sets the visual tone, the distinctive, elegant shape and advanced technology of this faucet will never fail to delight the most discerning user.

A shining example of diverse functionality

LUMINAQUA® allows light and water to interact. At first glance, the light ring is integrated invisibly into the aerator, which can be pulled down up to 23 inches. The LEDs use a minimal amount of power and have a service life that extends for years. Practical and economical: the light switches off automatically after 45 minutes.

Peace and harmony

Feeling safe and secure. The desire for harmony is a human longing that finds particular expression at home, within one's own four walls – and rightly so. This is where we like to be, and this is where we like to be able to rely on things. KWC takes the desire for reliability very seriously – with faucets that stand out thanks to their precision, long lifespan, diversity of functions and timeless design. With all these aspects, the focus is on one thing: outstanding Swiss quality.

KWC AVA

KWC AVA turns the daily interaction with water into an experience of sparkling pleasure. The combination of cylinder and cube forms a single harmonious unit that makes many things possible – and all things a little easier. Simply beautiful. Simply water.

Far-reaching

The pull-out spout fits comfortably in your hand and gives you complete freedom of movement at all times. Being able to pull it out up to 27 inches can be crucially important in the kitchen.

Aesthetic appeal across the whole range

Whether it is a version with a pull-out spray or pull-out aerator, a model operated from the top or the side, or an elegant soap dispenser that matches the series – KWC AVA presents winning solutions across the entire line.

KWC EDGE

KWC EDGE is a godsend in the modern kitchen. Slim and as shiny as a mirror: the playful line and brilliant design set a stylish note and transform the faucet into an eye-catching feature that is simply and thrillingly fun. Incidentally: KWC EDGE is the perfect solution, even for smaller budgets. All without having to take shortcuts in matters of operating convenience and quality of workmanship.

KWC DOMO

KWC DOMO is a real classic and has become virtually synonymous with kitchen faucets over the years. Since it was first launched in 1982, this successful model has been subtly redesigned a number of times, and so it has always remained contemporary.

KWC DIVO-ARCO

With its confident and stylish presence, KWC DIVO-ARCO is the obvious choice. Its straightforward, elegant visual impact and discreet, carefully crafted details, such as the uniquely defined loop lever, set standards in design and style which reach far beyond the here and now. With its acknowledgement of puristic understatement, even after many years, KWC DIVO-ARCO will convey an impression of modernity.

KWC LUNA

KWC LUNA is a faucet full of beauty and character. On the one hand, there is the harmonious, slimline design, and on the other, an impressive array of functions – not to mention the knowledge that this premium product is setting new standards in an attractive price range.

KWC soap dispensers

KWC soap dispensers are in tune with the trend towards uncluttered, functional kitchens. They match the various different lines in design and character and, with their discrete elegance, create an atmosphere of order and clarity.

Maximum functionality

The large soap container (concealed beneath the sink) holds over 10 fluid ounces, and has an ingenious system that allows it to be filled from the top. KWC soap dispensers – a little bit of luxury that has become an essential.

KWC bath

The bathroom is a place of rest and relaxation. It is where elegance meets indulgence, where aesthetics meet sensuousness, where quality meets passion. KWC makes personal care a wellness experience. Individualistic lines captivate with their perfection, optimal functionality and timeless design. KWC gives the bathroom a personal touch, the magic of an oasis of well-being.

KWC ONO

KWC ONO is a masterpiece of minimalism. Delicate design and high-quality materials and craftsmanship are reflected in every detail of this line of faucets, to give a touch of prestige to the modern bathroom. One particularly stylish feature of the faucet is the slim operating lever made of hardened stainless steel which allows uniquely precise control while giving KWC ONO its unmistakable character.

Graceful form, strong character

Fine materials, simple style and the latest technology are the defining features of a faucet which will give your bathroom a touch of class and prestige.

Straight lines

The style of the KWC ONO is defined by its clear, simple lines. The uncompromising geometry gives this faucet a strength that goes far beyond the bounds of the everyday.

Strength and style

Slim but very stable: the operating lever on the KWC ONO (middle) is made of specially hardened surgical stainless steel and is resistant to corrosion. It acts directly on the cartridge, guaranteeing maximum precision.

The ultimate in form and function: the acclaimed Neoperl® Caché® aerator is incorporated inside the spout (right) so that it blends into a harmonious whole.

Timeless beauty

KWC ONO is an image of simple elegance. The minimalist design gives your bathroom a fanciful, light touch, making every moment spent there an unforgettable experience.

Standing ovations

KWC ONO offers an extra special source of inspiration with this new model (opposite) for freestanding bathtubs. It leaves even more scope for your imagination – and will cut a fine figure in any bathroom.

KWC ΔVA

With KWC AVA, the extraordinary becomes a matter of course. The slim proportions and cubic style are the defining characteristics of this series which create such a confident, striking impression. It forms a link between traditional products and modern design, while fully accommodating the desire for individuality. A line of faucets that delights a wide audience.

Your bathroom – your space

KWC AVA offers inspiration for people who take pleasure in filling their own space with their own dreams. The bathroom becomes an expression of a way of living which seeks peace and harmony – and finds both through natural contact with water.

Full lever action

The eye-catching feature of this faucet is its flat lever, which is based on an innovative lever principle with an invisible lifting mechanism. It moves and lifts simultaneously on opening – thus providing a completely new feel to its operation.

Saving systematically

The KWC AVA lavatory faucet meets the highest standards in terms of aesthetics, ecology, hygiene and washing comfort. Around 1.5 gallons per minute (at 60 psi) flow from the integrated Neoperl® Caché® aerator, meaning that between 30% and 40% less water is used than with standard lavatory faucets.

COOLFIX
smart energy saver

The environmentally aware use of energy and water is an important concern to us. KWC AVA is exemplary in showing how sustained thinking influences product development – and how much pleasure can be spread by thinking about ecology and the environment. Thanks to COOLFIX, it is cold water rather than lukewarm water which flows when the lever is in the central position, thereby substantially reducing the consumption of hot water.
